

# SEND REPLACE BUTTONS - REDEFINITION

## Buttons under discussion:

## 2nd Proposal: a 3-button solution

## Check Button:

- always enabled if an action panel has the focus,
- is optional, checks are performed when necessary,
- has three visible states:

○ Unchecked

○ Checked with errors

and

○ Checked without errors, which includes warnings or info

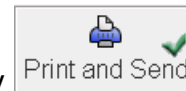

- clicking on the Check button always performs all the tests except the send-specific ones,
- shows Dialog "ValidationResult" if Errors, Warnings or Info found
- shows always "Unchecked" when opening a dossier, thus forcing a full test before sending this.

## Print Button:

- always enabled if an action panel has the focus
- can be used independent from any state of check
- performs a print on the default printer:
  - a final print if not combined action or search action
  - a draft print if combined action or search action
- always allows to select the forms to print in a print select dialog
- doesn't change any status if printing was done.

## Print & Send Button

- enabled if
  - an action has the focus AND
  - this action is unchecked or is error-free;
- shows if this action has been sent successfully
- all the checks not yet performed are executed now. The same check on unchanged actions is avoided;
- if any errors arise during send check, neither print nor send are performed;
- if additional warnings or infos come up during the send check the examiner can decide whether to continue or cancel the process;
- if the check is done without any errors, warnings or infos, the send process starts immediately (without prior confirmation);
- simple action only (not search report): after successful send, the examiner can select the forms to print in a print select dialog. He can also decide not to print anything;
- the examiner always gets a confirmation in a message box after print and send, maybe successful or not.

## Modifying data of an action

- requires new check and send, thus removes the check marks from all the

---

Effect on the status of an action (**1st draft of this, for discussion**):

From the examiner's point of view the status of an action can be

- not sent (former: active, printed, checked, ready)
- sent (former: sent-not-coded, sent)
- read-only (former: archived, dispatched)
- maybe special: being processed, purged, reactivated
